

NAVEEN KUMAR M

Application Security Engineer | VAPT | DevSecOps

Chennai, India · Open to International Relocation | naveenkumar.murugesannk@gmail.com | +91 86670 99651
Portfolio: naveenkumar291.github.io

PROFESSIONAL SUMMARY

Security engineer with 3+ years of hands-on experience across application security, DevSecOps and network security. Skilled in **vulnerability assessment and penetration testing (VAPT)** of web applications and infrastructure, and in embedding **automated security testing into CI/CD pipelines** (SAST, DAST, SCA, secrets, container and IaC scanning). Combines an offensive-security mindset with a strong foundation in networking, identity and endpoint security, SIEM monitoring and risk-based remediation. Experienced in communicating security status clearly to technical teams and stakeholders. Aligned with OWASP, ISO/IEC 27001, CIS Controls and NIST. Open to international relocation and remote opportunities.

CORE COMPETENCIES

Application Security	VAPT, DAST, SAST, SCA, Vulnerability Management, Risk Assessment, OWASP, Secure SDLC, Security Testing
Security Tools	Burp Suite, OWASP ZAP, Nmap, Metasploit, Kali Linux, SonarQube, Trivy, Gitleaks, Checkov
DevSecOps	CI/CD, GitHub Actions, Security Gates, Automated Security Testing, Terraform, Kubernetes
Security Monitoring	Wazuh, Splunk, SIEM, Zeek, Incident Analysis
Malware & AI Security	FLARE VM, REMnux, Wireshark, Procmon (malware analysis); LLM, prompt injection and MCP security (emerging focus)
Cloud & Infra	AWS, IAM, Security Groups, NACLs, Linux, Windows, Firewalls, VPN, DNS, DHCP, NAT
Microsoft	Microsoft 365, Entra ID, Intune, Endpoint Management
Standards	OWASP, ISO/IEC 27001, CIS Controls, NIST

PROFESSIONAL EXPERIENCE

Syncfusion · Chennai, India

VAPT Engineer

1.9 years

- Performed VAPT on web applications and infrastructure using Burp Suite, Nmap, Kali Linux and Metasploit, identifying and validating vulnerabilities by risk, severity and exploitability.
- Drove remediation by analysing findings, documenting technical evidence, prioritising vulnerabilities and following up with engineering teams through to closure.
- Contributed to DAST and DevSecOps automation with OWASP ZAP, SonarQube, Trivy, Gitleaks and Checkov, integrating security checks into CI/CD pipelines and automated build workflows.
- Applied OWASP principles, ISO/IEC 27001 concepts and security best practices when assessing vulnerabilities, controls and remediation requirements.
- Reported open findings, remediation status and risk trends to stakeholders, improving transparency of the organisation's security posture.

Network Engineer

1 year

- Managed and troubleshooted enterprise network infrastructure (switches, routers, DNS, DHCP, NAT, VPNs, firewalls) for secure and reliable business connectivity.
- Monitored security and infrastructure events with SIEM and network-security tools; investigated anomalies and escalated issues by severity and business impact.
- Supported Microsoft 365, Entra ID, Intune and endpoint security operations, including access control, device management and security troubleshooting.
- Implemented network-security controls and procedures aligned with organisational standards, improving infrastructure resilience and reducing risk.

Network Engineer

5 months

- Supported enterprise network operations (switches, routers, TCP/IP, DNS, DHCP, VPN, firewalls), resolving connectivity and configuration issues across user and infrastructure environments.
- Assisted with network security monitoring and incident troubleshooting; escalated security-relevant events to the appropriate teams.
- Troubleshoot Windows and Linux systems, supporting secure configuration, patching and operational availability.
- Maintained technical documentation and followed structured incident-resolution procedures to reduce recurring issues.

PROJECTS

DevSecOps Security Pipeline

GitHub Actions · SonarQube · Gitleaks · Trivy · Checkov · OWASP ZAP · Terraform · Kubernetes

- Built an end-to-end DevSecOps CI/CD pipeline integrating SAST, SCA/dependency scanning, container security, secrets detection and IaC security checks.
- Enforced SonarQube quality gates and used Gitleaks, Trivy and Checkov to catch vulnerabilities and misconfigurations before deployment.
- Configured OWASP ZAP DAST scans to validate web-application security within the software delivery lifecycle.
- Automated security validation across source code, dependencies, container images and Terraform/Kubernetes configurations.

Additional Security Labs (code and write-ups at naveenkumar291.github.io)

- Penetration Testing & VAPT Lab: reconnaissance, port scanning, service enumeration and controlled validation using Nmap, Metasploit and OWASP ZAP on Linux.
- Malware Analysis Lab: isolated environment with FLARE VM and REMnux for static, dynamic and network-based analysis (Wireshark, Procmon, FLOSS).
- Security Monitoring & SIEM: Wazuh and Splunk labs covering centralised logging, Syslog integration, event analysis and alert investigation.
- Multi-Environment DevOps: Development, Staging and Production workflow with environment-specific configuration and CI/CD automation.

EDUCATION

Bachelor of Technology (B.Tech) — Information Technology
Panimalar Engineering College, Chennai

2023
CGPA: 8.85 / 10

LANGUAGES

English: Professional working proficiency
